

Hope Builders

In order to keep our serving teams and those they serve as safe as possible, please apply wisdom to the following team protocols:

- Ask resident if they are comfortable with a small crew coming to do the project at this time, or if they would prefer to postpone.
- If resident shares that they are sick or have been in contact with any positive case, postpone project.
- Whenever the team comes into contact with the resident, they (the team and the resident) should wear masks during that encounter.
- Anyone showing any symptoms or signs of illness (dry cough, sore throat, shortness of breath) or has been in contact with known positive case needs to stay home.
- Advise crew members to check their temperature before leaving their home – anything **over 100.4°** they need to stay home.
- Crew size will not exceed 10 people
- Maintain 6 foot distancing when possible
- Frequently sanitize all high touch areas, when possible
- Avoid entering the residence (eg. to use the restroom). If utilizing resident's restroom, sanitize all door handles, light switches, or other touched surfaces on the way to and from the restroom, every time someone uses it.
